

Yvé Vanity, in the wall or floor versions, is an innovative idea in which the different elements that normally make up the bathroom are designed to offer an intelligent and practical solution. From the tap to the towel rack, all in one, a new language is materialized playing between functionality and classic beauty. A complete concept, light and easy to install that is delivered in a Yvé bathrooming that contains all the hydraulic components necessary for commissioning without the need to puncture walls or request the intervention of specialized technicians. Yvé bathroom thanks to its structure and personality, resolves the limits of traditional bathrooms such as the compatibility between the different elements and the inclusion within pre-existing environments, representing the perfect complement for both contract and private use.

\*The versatility of Yvé Vanity is given, moreover, by the possibility of customization with regards to colors, the choice of the type of wood, and the same width of the unit, for which, for example, it is possible to request two washbasins instead of one.
