

Solar is a coffee table that, through a system of overlapping tops, optimizes spaces and offers greater possibilities of use and storage than a traditional side table. The tops and structure in lacquered iron give Solar lightness and strength, features that allow it to be used “without worries”. The tubular structure is in lacquered iron as well as the two 4mm-thick shelves, everything is powder-coated, a technique that guarantees greater resistance to use and gives a finishing without imperfections. Solar is also available in the Chrome version, with a strong character and visual impact, with a chromed extra-glossy iron structure and a stainless steel top.

\*For special needs, such as those typical of the contract, it is possible to select different materials and finishes than the collection standard.
